

A010

CONFINED SPACE SAFETY TEST

CIRCLE THE CORRECT ANSWER

1. Which of the following are confined spaces?

Man Holes	Pipelines	Pits
Pump Stations	Process Vessels	Digestors
Septic Tanks	Sewers	Trenches
Vaults		

2. True False

Limited openings for entry and exit are characteristic of a confined space.

3. True False

Unfavorable natural ventilation is a characteristic of a confined space.

4. True False

Not being designed for continuous worker occupancy is a confined space characteristic.

5. True False

Oxygen-deficient atmospheres are one of the three hazards associated with confined spaces.

6. True False

Flammable atmospheres are one of the three hazards associated with confined spaces.

7. True False

Toxic atmospheres are one of the three hazards associated with confined spaces.

8. True False

Some hazardous gases found in wastewater systems are lighter than air.

9. True False

Some hazardous gases found in wastewater system are heavier than air.

10. Confined spaces in Wastewater Systems are found:

- A. Only in pipe lines
- B. Only in Man Holes
- C. Only in Pump Stations
- D. Everywhere

11. True False

A trench can be a confined space.

12. True False

Oxygen can be used up in a confined space by metal rusting.

13. True False

Hydrogen Sulfide numbs the sense of smell as it nears dangerous levels.

14. True False

All confined spaces require testing before entry.

15. True False

The source of many hazardous gases in a wastewater system is the wastewater liquid.

16. True False

An oxygen deficient confined space has less than 19.5 % oxygen.

17. True False

The process of rotting wastewater material may form hazardous gases.

18. True False

Safety equipment such as self contained breathing apparatus will not protect you from flammable atmospheres.

19. True False

When testing confined spaces you only need to test the bottom of the space.

20. True False

Your nose can not determine oxygen levels.

21. True False

Physical hazards such as drowning are not a concern when in a confined space.

22. True False

Knowing what chemical was in a confined space is important for safe entry.

23. True False

When testing indicates an unsafe level of hazardous gas, ventilation and testing must be performed before entry.

24. True False

When entering a confined space with hazardous gases, a full body harnesses and life line suitable for rescue shall be worn.

25. True False

The leading cause of confined space deaths is FAILURE TO RECOGNIZE THE HAZARD.
