

**COMMENTS ON PROPOSED AMENDMENTS
TO THE WATER QUALITY STANDARDS, R317-2**

Submitted by Heather Dove by telephone August 19, 2008

Hello, Leah Ann. My name is Heather Dove and I'm calling to submit a comment during this public comment period on the proposed water quality standards changes for the Great Salt Lake. I am not in favor of allowing increased levels of selenium. I think the Great Salt Lake is a critical bird habitat and it has a very fine balance that we need to make sure we don't mess with. I also think that our brine shrimp industry is healthy and we don't want to mess with that and I also think that increasingly, there are more people who come to recreate around the Great Salt Lake and selenium is neuro-toxic, it is bad stuff and I don't think we should allow any increased levels from where we are now. If you want to talk to me about this, I'd be happy to talk some more. My number is 424-0010. However, if you don't need to call me, then that's fine also. I just wanted to submit my comment and your name and number was listed as the place to go to. So I hope you take this into consideration. Thank you very much. Good bye.
