

COMMENT NO. 5: MARK ATENCIO

Mark Atencio, representing Jordan Valley Water Conservancy District, read his comments as follows:

The District is very appreciative of this long and expensive process and also all of those who have participated, many of whom are in attendance. The District recommends that the Board adopt the Standard for Selenium that has been proposed. In addition, the District is concerned that the assessment methodology raises problems and challenges and recommends that the assessment methodology not be adopted at this time. Instead the Board could direct staff to have further investigation and discussion with stakeholders and develop an assessment methodology which would work more effectively.

Thank you.
