GSL Numeric Standards

Dear Ms. Gardberg:

Hurrah! There are numeric standards for the Lake in the works. As we discussed at the public meeting these are necessary. To state the obvious, Great Salt Lake is a terminal lake, and if numeric standards are not developed and followed it's pollution will continue indefinitely.

I want to thank you for the presentation I watched on the computer at the public meeting. It was a very good presentation.

Sincerely yours,

Owen Kent Covey
